

Measurement instruction:

Cabinet with sliding doors in front of the body

Step 1:

Enter the measurements (cm) into the corresponding boxes:

Required tools:

Tape measure or folding rule, pen, and the printed measurement guide.

How to measure correctly:

Measure the height and width in several places and always take the smallest measurement.

"Space" for easy installation:

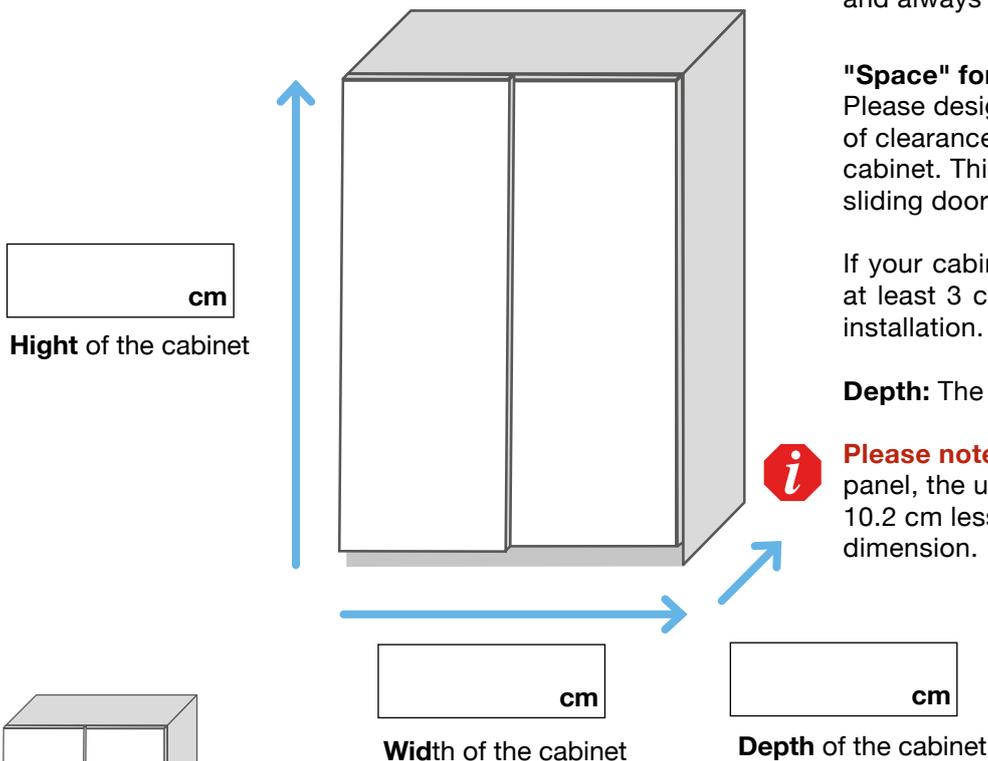

Please design the cabinet so that there is 7 cm of clearance between the ceiling and the cabinet. This space is necessary to hang the sliding doors later.

If your cabinet is placed in a niche, please plan at least 3 cm of space on the left and right for installation.

Depth: The indicated depth includes the doors.

Please note: Due to sliding doors and the back panel, the usable interior depth of the cabinet is 10.2 cm less than the specified exterior dimension.

From a height of 262.2 cm, we manufacture your cabinet with a skirting board so that you can adjust it better and align it perfectly.

Step 2:

After measuring, you can quickly and easily enter the data into the cabinet configurator at <https://www.Furnfab.com/en/products-cabinets>.
